

## Patient Charting for the 21st Century

Clinical Software Solutions has developed software to meet the needs of your nursing services. Listed below are a few of the areas your nursing staff will see immediate benefits with our software. Patient charting, emergency room records, respiratory therapy, physician orders, quality assurance, infection control, and charging. With CLIN1 Nursing, you'll have the ability for complete electronic charting. An increase in revenue should be expected due to fewer missed charges. This is accomplished using barcode scanning technology. Supplies used within your nursing department will be coded, tracked, and charged. With CLIN1 Nursing, staff will be able to increase the time available to provide patient care. Nurses will have available discharge instruction information and handouts for preventive care (smoking, diabetic, hypertension, etc.)

### Features:

- Flexible patient assessments (shift and initial)
- Fast, accurate medication administration records
- Express medication administration for OR and ER environments
- Documents pending, administration, and canceled medication doses
- Identifies and prevents potential medication errors
- Automatically calculates medication dose schedules
- Tracking of patient allergies
- Unlimited users (both licensed and un-licensed) with built-in multi-level security
- Physician orders
- Built-in order communications
- Integrated with CLIN1 Laboratory for immediate access to lab results
- Integrated with CLIN1 Radiology for immediate access to readings
- Charge nurse review functions for medication orders
- Automated vital statistics tracking
- Dietary and input/output tracking
- Tracks patient activities
- NANDA compliant care plans
- Generates wristbands
- Generates medication labels
- Generates IV labels
- Barcode enabled for speed and error prevention
- Easy to use Windows GUI interface for point and click simplicity
- Nurses notes
- Treatments and interventions
- Needs and replenishment functions for communications to central supply
- Charge collection and transmission functions for integration with financials
- Tracks patient property
- Tracks surgical history
- Tracks and documents patient education
- Built-in quality assurance functions
- Built-in user defined system dictionary assures that all staff members use the same terminology for consistent documentation
- Use with desktop, laptop or tablet (touch-screen) computers
- CLIN1 Nursing is an integrated component of our Electronic Medical Record (EMR)
- Generates PDF documents for processing by Document Filing Systems (DFS – an alternative EMR pathway)
- HL7 portals available
