

1

RIGHT PATIENT

CLIN1 Nursing provides 5-Rights testing to verify meds are being administered appropriately (Right Patient, Right Med, Right Route, Right Dose, Right Time). Location specific patient census guarantees that you have access to YOUR patients but not the ability to browse the records of other patients that may be present at other locations within your facility. Just like HIPAA wants it. On the other hand, our multi-level security controls access to patient records in a responsible manner, assuring that the people that need access have it when they need it.

2

VITAL SIGNS

Never more than a mouse click away, CLIN1 Nursing tracks Patient Allergies, Vital Signs, Medication Profiles, Patient Assessment, Patient I/O, Patient Activity, Dietary Requirements, Falls Risk and Physician Orders. Our barcoded wristbands and medication labels help prevent medication errors by providing Positive Patient Identification. Charges for medication are collected automatically as medications are administered to the patient. The result is no more lost med charges. Patient information is maintained over multiple admissions. Our wireless capability allows you to make bedside entries such as patient vital signs into your patient record in real time assuring your patient records are up to date at all times.

3

COLOR CODED MEDICAL PROFILES

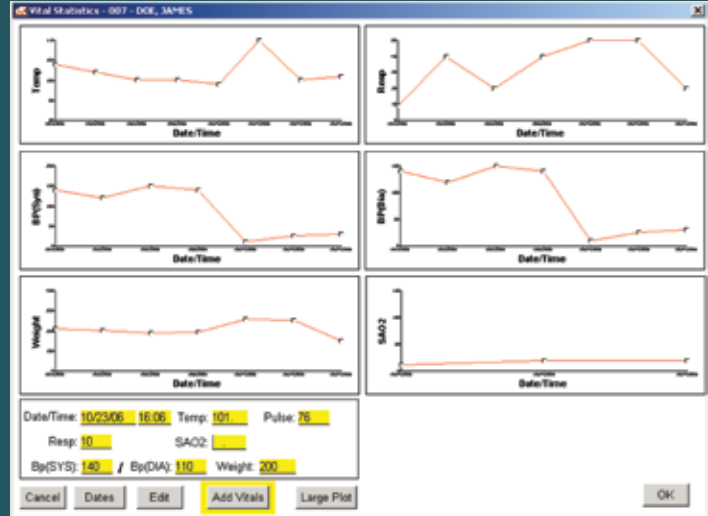

Medication Administration Records, Care Plans, Nurse's Notes... It seems like, more and more, nursing duties are surrounded by paperwork and documentation requirements. CLIN1 Nursing is the answer to your information collection and management burden. CLIN1 Nursing is a tool to help busy nurses stay ahead of the documentation game while keeping necessary patient information at their fingertips. Our heavy use of color coding helps your nursing staff with interpretation of digital data, decreasing the chance errors while improving patient care.
