

The RIS you've been waiting for

CLIN1 Radiology is an easy to use easy to maintain system for tracking radiological and imaging procedures. Based on an industry standard 32-bit/64-bit SQL Engine, all data is stored in an ODBC accessible form. Scalable in size from 1 to unlimited users, any size configuration is available. Friendly, easy to understand screens guarantee that you will be operational with a minimum of time invested.

Need to start small and add additional capabilities later? That's not a problem with CLIN1 Radiology. Start with a 1-4 user system and add users as your needs increase. Add Transcription, PACS and HL7 communications at any time. Our HL7 capabilities allow you to import patient demographics and ADT (Admin, transfer, discharge) information at any time. This greatly decreases your data entry burden. CLIN1 Radiology integrates with 3rd party PACS systems (or our own) to reliably and efficiently send images and technical notes to your remote reading radiologist, where ever they may be.

Our PACS is compatible with any DICOM compliant imaging system.

CLIN1 Radiology Features

- Windows based - point and click ease of use
- Simple user friendly interface
- Short learning curve
- Integrated with CLIN1 PACS and third party PAC systems
- Supports unlimited modalities
- Charge generation (bundling and individual charges)
- Multi-level HIPAA compliant security and audit trails
